

Akhil Baratam

akhilbaratam.dev@gmail.com | +91 6281213336 | LinkedIn | GitHub

Skills

Cloud & Infrastructure: AWS (EC2, S3, RDS, Lambda, CloudWatch, IAM, VPC, ELB), GCP, Terraform

Containers & Orchestration: Docker, Kubernetes, Helm, Karpenter

CI/CD: GitHub Actions, Jenkins, Argo CD, Git, GitOps

Monitoring & Observability: Prometheus, Grafana, Datadog, Loki

Automation: Python, Shell Scripting, YAML, Argo Workflows

Operating Systems & Networking: Linux, Networking, Nginx

Databases: MySQL, PostgreSQL

Experience

Datavedam (client: Digi International) | DevOps Engineer July 2025 – present

- Co-built a PR-triggered isolated-environment system that provisions a dedicated namespace with IRSA, service dependencies, test databases, and AWS emulators in 10 minutes, auto-scaled via Karpenter.
- Managed Terraform-based AWS infrastructure across 4 environments (dev/qa/staging/prod) and 8 EKS clusters, enabling GitOps-driven deployments through ArgoCD and Jenkins.
- Engineered Argo Workflows and Python-based automation for Terraform workspace orchestration, isolated-environment cleanup, and scheduled database replication between staging and QA environments.
- Instrumented Datadog monitors, dashboards, and custom metrics for incident detection and observability.
- Led EKS cluster upgrades supporting production behind a 100k+ connected-device IoT platform.

Vizualytic Data Solutions | Software Developer Intern April 2025 – June 2025

- Developed and maintained multi-stage GitHub Actions CI/CD pipelines, automating deployment workflows across multiple environments.
- Built Grafana dashboards using Prometheus and Loki, centralizing application and infrastructure observability.
- Automated internal workflows using Python and third-party API integrations, reducing repetitive operational tasks.

Projects

GCP-tf-infra | Self-Hosted Kubernetes Platform on GCP May 2026 – June 2026

Tech stack: Terraform, GKE, ArgoCD, GitHub Actions, Gateway API, WIF, Helm, Artifact Registry, Prometheus, Grafana, Loki, Cloud NAT

- Provisioned a private, version-controlled GKE cluster with modular Terraform spanning VPC, Cloud NAT, Secret Manager, IAM, and Gateway API.
- Engineered a GitOps pipeline from GitHub Actions to ArgoCD via Workload Identity Federation, eliminating long-lived credentials and reconciling deployments cluster-wide every 180 seconds.
- Routed all services through one Gateway API and a single global external HTTP load balancer with path/host-based routing, replacing per-service Ingress LBs.
- Unified metrics and logs across all cluster workloads in a single Grafana view using Prometheus, Grafana, Loki, and Promtail.
- Configured demand-based cluster autoscaling via GKE Node Auto-Provisioning up to a 50-vCPU/128-GiB ceiling, with automated Helm releases via Artifact Registry.

Education

Lovely Professional University | Punjab August 2021 – May 2025

Bachelor of Technology - Computer Science and Engineering **CGPA - 7.69**

Tirumala Educational Institutions | Visakhapatnam April 2019 – March 2021

Intermediate- **9.6/10** JEE MAINS-**93%**(percentile)
